OBJECTIVE

Full Stack Developer with over three years of hands-on experience in web development, seeking full-time Software Developer roles in Berlin. I excel in crafting bespoke solutions that empower clients to optimize productivity and streamline operations. Specializing in Python, I am driven by a passion for leveraging cutting-edge technology to deliver tailored software solutions that address the unique needs of businesses.

EXPERIENCE

Linkacode

Co-Founder & Full Stack Developer

February 2024

Argentina

- I developed and led the backend development team for one of the most important universities in Argentina.
- We improve the productivity of students, professors and university workers thanks to our software.
- We increased student use of the website by 25% thanks to our API that facilitates quick access to each student's class schedule.
- We created a dashboard 100% manageable by the university's employees, which significantly increased productivity when loading data into the database.
- The technologies I used and implemented were: Python, Django & Django Rest, PostgreSQL, Linux, Git, Trello.

UTN Haedo <https://frh.utn.edu.ar/>

Full Stack Developer

Sep 2023 - Feb 2024

Buenos Aires, Argentina

- I developed plugins and web components that helped increase the productivity of the workers using the website.
- I helped the development team considerably in the refactoring of the website code.
- Actively participate in meetings and discussions with the development team to plan new projects and improve current ones.
- The technologies I used and implemented were: JavaScript, Python, Wordpress, MySQL, HTML, CSS.

ARM Services <https://arm-services.com/en/home/>

Full Stack Developer

Jun - Sep 2023

Chile

- I significantly improved the performance and optimized the website.
- Significantly improved user interaction, driving sales of services and improving customer experience.
- Improved the user experience by working hand in hand with a frontend developer.

Costa Rio Parana

Backend Developer

Dec 2022 - Jun 2023

Argentina

- Developed comprehensive solutions as a Backend Developer, utilizing Python, Django, MySQL and deploying servers with Nginx on Linux environments.
- Led the technical implementation of automations, ensuring efficiency and compliance with functional and non-functional requirements.
